

Batch Healthcare Version 3.1.0 is Now Generally Available (GA)

November 1, 2007

SoftBase Systems, Inc. is pleased to announce the release of Batch Healthcare, version 3.1.0. The Batch Healthcare product suite consists of three major components. They are the Attach Facility, the Checkpoint Facility, and the newest product from SoftBase Systems, Batch Analyzer.

The Batch Analyzer component is a batch DB2 monitoring and analysis tool, while the Attach Facility and the Checkpoint Facility serve as replacements for all releases of Database Attach, Database Checkpoint, and Database Rely. In keeping with the company tradition of excellent technical support, SoftBase Systems provides downward compatibility within the Batch Healthcare product code. Current customers of Database Attach, Database Checkpoint, and Database Rely are provided an easy migration path with minimal changes, if any, to their existing environment.

Migration to the Batch Healthcare product suite offers several advantages and new features over the existing products. They include Multiple CPU support in a single password, Large Format Dataset support, and a new Checkpoint Frequency API.

SoftBase Systems, Inc. will drop technical support for all versions of Database Attach, Database Checkpoint, and Database Rely as of November 1, 2008.
